Art Unit: 1642

DETAILED ACTION

1. If applicant does not respond to both the Sequence and restriction requirement, then the response will be help non-responsiove.

Sequence Listing

2. This application contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR 1.821(a)(1) and (a)(2). However, this application fails to comply with the requirements of 37 CFR 1.821 through 1.825 for the reason(s) set forth on the attached Notice To Comply With Requirements For Patent Applications Containing Nucleotide Sequence And/Or Amino Acid Sequence Disclosures.

Election/Restriction

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-17, drawn to peptides and conjugates, classified in class 530, subclass 324+.
 - II. Claim 18, drawn to a polynucleotide, classified in class 536, subclass 23.1+.
 - III. Claims 41-54, drawn to sesquiterpene-gamma-lactone derivatives, classified in class 530, subclass 391.1+.
 - IV. Claims 19-40 and 55-65, drawn to prodrug and methods of making and using the prodrug, classified in class 514, subclass 12+.
 - V. Claims 66-74 and 76-77, drawn to method of detecting PSA-antigen producing tissue, classified in class 435, subclass 7.1+.

Art Unit: 1642

VI. Claim 75, drawn to selecting for a prodrug, classified in class 436, subclass 543.

4. The inventions are distinct, each from the other because of the following reasons: Inventions I-III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to different products. For example, the product of Group I is a peptide whereas the product of group II is a polynucleotide and the product of Group III is a lactone derivative. These products are structurally and chemically different. The prodrug of Group VI is a peptide derivative--ie in addition to the peptide, it has a therapeutic agent attached to it. The methods of Groups IV-VI are different because they use different reagents, steps and have different end-results. For example, the method of Group V results in detection whereas the method of Group VI results in a selection and the method of Group IV results in a treatment or making of a compound.
5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1642

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sheela J. Huff whose telephone number is (703) 305-7866. The Examiner can normally be reached on Monday, Wednesday and Thursday from 6:30am to 4:00pm.

Communications via Internet e-mail regarding this application, other than those under 35 U.S.C. 132 or which otherwise require a signature, may be used by the applicant and should be addressed to [paula.hutzell@uspto.gov].

All Internet e-mail communications will be made of record in the application file.
